INTEGRATED APPROACHES TO SUSTAIN AND IMPROVE PLANT PRODUCTION UNDER DROUGHT STRESS

Preface	iv
<i>Passioura J.</i> The drought environment: physical, biological and agricultural perspectives	113
<i>Jones HG.</i> Monitoring plant and soil water status: established and novel methods revisited and their relevance to studies of drought tolerance	119
<i>Araus JL, Ferrio JP, Buxó R, Voltas J.</i> The historical perspective of dryland agriculture: lessons learned from 10 000 years of wheat cultivation	131
<i>Fereres E, Soriano MA.</i> Deficit irrigation for reducing agricultural water use	147
<i>Kudoyarova GR, Vysotskaya LB, Cherkozyanova A, Dodd IC.</i> Effect of partial rootzone drying on the concentration of zeatin-type cytokinins in tomato (<i>Solanum lycopersicum</i> L.) xylem sap and leaves	161
<i>Lafitte HR, Yongsheng G, Yan S, Li Z-K.</i> Whole plant responses, key processes, and adaptation to drought stress: the case of rice	169
<i>Reynolds M, Dreccer F, Trethowan R.</i> Drought-adaptive traits derived from wheat wild relatives and landraces	177
<i>Turner NC, Abbo S, Berger JD, Chaturvedi SK, French RJ, Ludwig C, Mannur DM, Singh SJ, Yadava HS.</i> Osmotic adjustment in chickpea (<i>Cicer arietinum</i> L.) results in no yield benefit under terminal drought	187
<i>Pastore D, Trono D, Laus MN, Di Fonzo N, Flagella Z.</i> Possible plant mitochondria involvement in cell adaptation to drought stress	195
<i>Ren H, Gao Z, Chen L, Wei K, Liu J, Fan Y, Davies WJ, Jia W, Zhang J.</i> Dynamic analysis of ABA accumulation in relation to the rate of ABA catabolism in maize tissues under water deficit	211
<i>Shinozaki K, Yamaguchi-Shinozaki K.</i> Gene networks involved in drought stress response and tolerance	221
<i>Talamè V, Ozturk NZ, Bohnert HJ, Tuberosa R.</i> Barley transcript profiles under dehydration shock and drought stress treatments: a comparative analysis	229
<i>Mane SP, Vasquez-Robinet C, Sioson AA, Heath LS, Grene R.</i> Early PLD α -mediated events in response to progressive drought stress in <i>Arabidopsis</i> : a transcriptome analysis	241
<i>Gorantla M, Babu PR, Reddy Lachagari VB, Reddy AMM, Wusirika R, Bennetzen JL, Reddy AR.</i> Identification of stress-responsive genes in an <i>indica</i> rice (<i>Oryza sativa</i> L.) using ESTs generated from drought-stressed seedlings	253
<i>Boyer JS, McLaughlin JE.</i> Functional reversion to identify controlling genes in multigenic responses: analysis of floral abortion	267
<i>Poroyko V, Spollen WG, Hejlek LG, Hernandez AG, LeNoble ME, Davis G, Nguyen HT, Springer GK, Sharp RE, Bohnert HJ.</i> Comparing regional transcript profiles from maize primary roots under well-watered and low water potential conditions	279
<i>Gazanchian A, Hajheidari M, Sima NK, Salekdeh GH.</i> Proteome response of <i>Elymus elongatum</i> to severe water stress and recovery	291
<i>Brini F, Hanin M, Mezghani I, Berkowitz GA, Masmoudi K.</i> Overexpression of wheat Na ⁺ /H ⁺ antiporter <i>TNHX1</i> and H ⁺ -pyrophosphatase <i>TVPI</i> improve salt- and drought-stress tolerance in <i>Arabidopsis thaliana</i> plants	301
<i>Ikeda H, Kamoshita A, Manabe T.</i> Genetic analysis of rooting ability of transplanted rice (<i>Oryza sativa</i> L.) under different water conditions	309
<i>Landi P, Sanguineti MC, Liu C, Li Y, Wang TY, Giuliani S, Bellotti M, Salvi S, Tuberosa R.</i> <i>Root-ABA1</i> QTL affects root lodging, grain yield, and other agronomic traits in maize grown under well-watered and water-stressed conditions	319
<i>Harris K, Subudhi PK, Borrell A, Jordan D, Rosenow D, Nguyen H, Klein P, Klein R, Mullet J.</i> Sorghum stay-green QTL individually reduce post-flowering drought-induced leaf senescence	327
<i>Welcker C, Boussuge B, Bencivenni C, Ribaut J-M, Tardieu F.</i> Are source and sink strengths genetically linked in maize plants subjected to water deficit? A QTL study of the responses of leaf growth and of Anthesis-Silking Interval to water deficit	339
<i>Ribaut J-M, Ragot M.</i> Marker-assisted selection to improve drought adaptation in maize: the backcross approach, perspectives, limitations, and alternatives	351
